

Contributing to the Examples

If you would like to contribute an example, please follow the easy steps below:

Category

Please visit [Examples](#) and locate a suitable category. Click the category and move to the Example **Headline** section below.

If none exists you can make one with the following template:

```
<wrap headline-image>[[objects|{{examples:headline-objects.png|}}]]
<span>Objects / Sprites</span></wrap>
```

objects

is the name of the path for your category, and is the actual link to your category page.

```
{{examples:headline-objects.png|}}
```

is the piece of code to use to bring in a suitable 180x100 pixel graphic to represent your category. This one will load headline-objects.png from the examples section. You can upload your own 180x100 image or choose from the ones available in the media manager. If you don't have an image, just use: examples:replace-me.png to use as a placeholder and someone will come along later and put a nice image on it.

```
<span>Objects / Sprites</span>
```

is the title of the category.

Save the page to see your new category. Which will look something like this:

Click the category to go to your new page. Click create to make it for the first time.

Category Page

This is the new category page. Add a major heading to show what category the user is in, for example:

```
===== Object Examples =====
```
