

Detecting Keyboard Key Down

Handy for single presses on keys. Does not continue to trigger if the key is held down.

Code

```
orxSTATUS orxFastcall Init()
{
    orxClock_Register(orxClock_Get(orxCLOCK_KZ_CORE), Update, orxNULL,
orxMODULE_ID_MAIN, orxCLOCK_PRIORITY_NORMAL);
    ...
}
```

```
void orxFastcall Update(const orxCLOCK_INFO *_pstClockInfo, void *_pContext)
{
    if (orxInput_HasBeenActivated("MyKey")) {
        orxLOG("MyKey is pressed.");
    }
}
...
}
```

Config

```
[KeysForInput]
KEY_ESCAPE = Quit
KEY_SPACE  = MyKey
```
