

Shader on an Object

Assets

Code

```
orxObject_CreateFromConfig( "DemoObject" );
```

Config

```
[DemoObject]
Graphic = DemoGraphic
ShaderList = Shader

[DemoGraphic]
Texture = ship.png

[Shader]
ParamList = texture
Code =
void main() {

    vec2 p = gl_TexCoord[0].xy;
    vec4 textureCol = texture2D(texture, p);

    gl_FragColor.rgb = textureCol.rgb;
    gl_FragColor.a = textureCol.a * (1.0 - p.y);

}
```

Result

Note: this simple shader is only effective for a single image texture. For spritesheets, see [this example](#) instead.
