Part 16 - Jelly Monsters

We need something to create challenge in the game. Alien jelly monsters are the obvious choice. Lots of them. Here's a sprite sheet for the monsters:

Right click and save to the data/anim folder as "monster.png".

Create graphics from the sprite sheet in the config:

```
[MonsterGraphic]
Texture       = monster.png
TextureOrigin = (0, 0, 0) ;required by the animation system for sizing.
TextureSize   = (32, 32, 0)
Pivot         = center
```

We need an object:

```
[MonsterObject]
Graphic      = MonsterGraphic
AnimationSet = MonsterAnimationSet
Position     = (90, 90, 0)
Scale        = 2.0
```

Then to define the animation set and the one animation we need:

```
[MonsterAnimationSet]
Texture             = monster.png
KeyDuration         = 0.1
FrameSize           = (32, 32, 0)
MonsterWobbleAnim   = -1 ;use the entire sheet
StartAnim           = MonsterWobbleAnim
MonsterWobbleAnim-> = MonsterWobbleAnim
Pivot               = center
```

Just so you can see the monster working... add a MonsterObject to the Scene childlist:

```
[Scene]
ChildList = PlatformObject # MiddlePlatformObject #
TopLeftPlatformObject # TopPlatformObject #
TopRightPlatformObject #
StarObject # MonsterObject
```

Run the game and you'll see a monster wobbling in the top left hand corner of the screen:

We need more than one monster, very soon we'll make lots of them drop out of the sky.

Last job is to give the monster a body and ensure he collides with platforms, bullets, and our hero:

```
[MonsterObject]
Graphic      = MonsterGraphic
AnimationSet = MonsterAnimationSet
Position     = (90, 90, 0)
Scale        = 2.0
Body         = MonsterBody

[MonsterBody]
Dynamic  = true
PartList = MonsterBodyPart

[MonsterBodyPart]
Type        = box
Solid       = true
SelfFlags   = monster
CheckMask   = hero # platforms # bullet
```
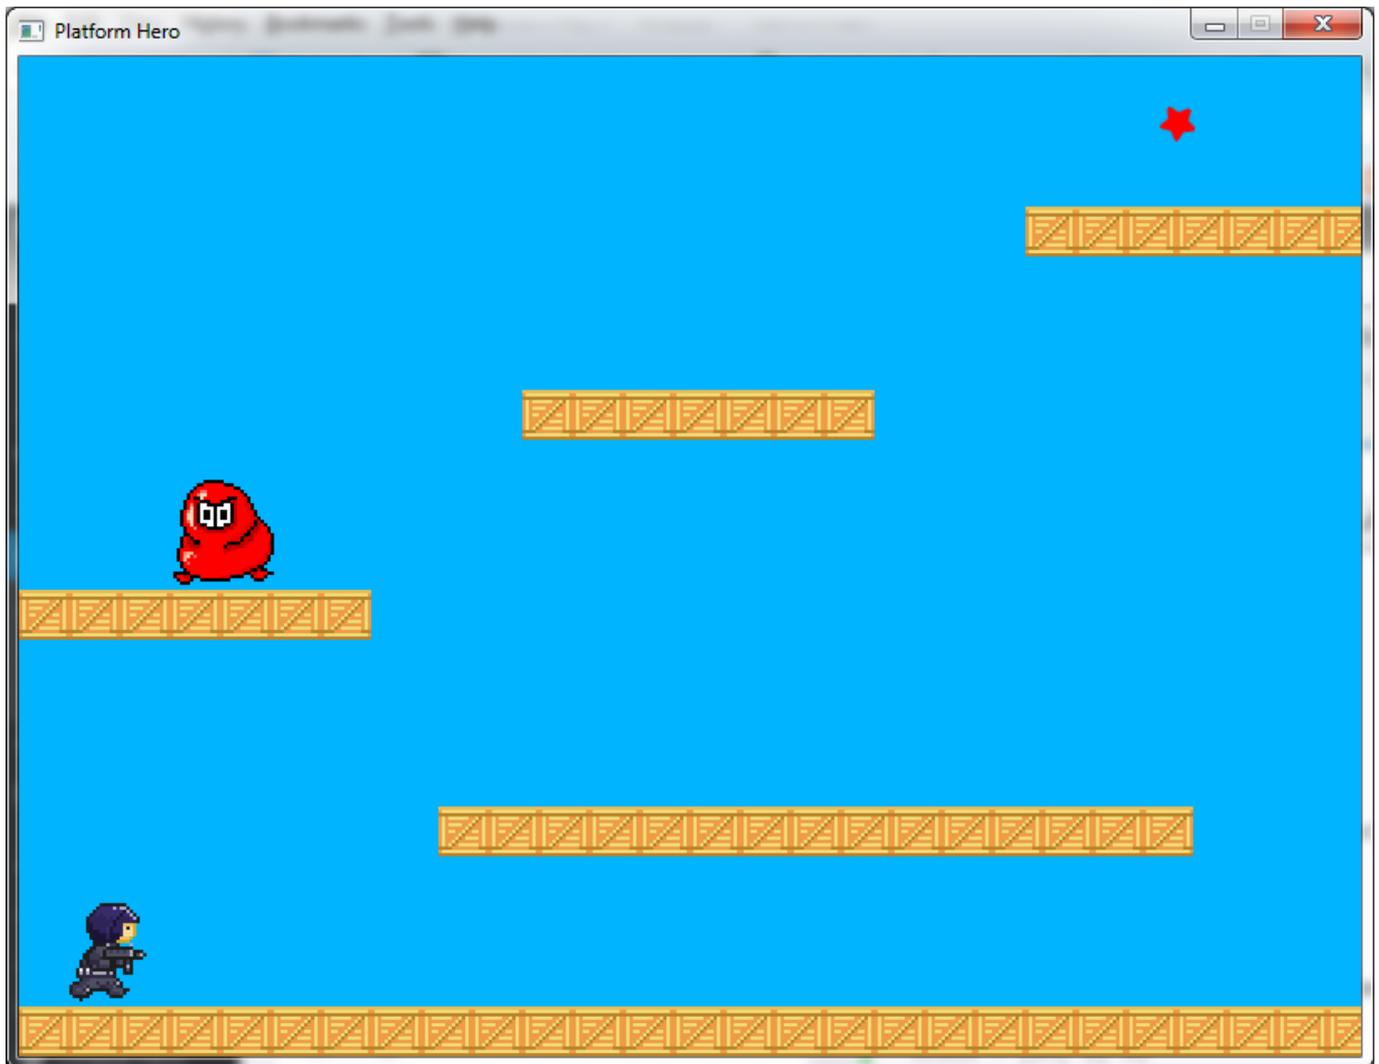

And add "monster" to the PlatformBody so that collisions work on both object types:

```
[PlatformBodyPart]
Type        = box
Solid       = true
SelfFlags   = platforms
CheckMask   = hero # monster
```

Run it again and the monster should drop nicely onto a platform.
