

Orx Timeline and Timeline Track Structures

The following is simply from CreationTemplate.ini:

```
[TimeLineTrackTemplate]
[Float] = "Your timeline event text here" | "Your command"; NB: Float is a
time in second (>= 0)
; after which this timeline event is going to be triggered; If the event is
a valid command
; it'll get executed by the command module;
Loop = true|false;
KeepInCache = true|false; NB: If true, the timeline track will always stay
in cache,
; even if no track of this type is currently in use. Can save time but
costs memory. Defaults to false;
```
