

Input/Output (IO)

OrxFile

File / file system module. Module that handles file / file system access.

OrxInput

Input module. Module that handles generalized inputs (keyboard, mouse, joystick, ...)

Input events may be defined either in the config file or in code with `orxInput_Bind*`() functions. They can be changed on the fly, of course, and you can create inputs than don't necessarily map to physical device by using the `orxINPUT_TYPE_EXTERNAL` value of the enum.

It allows to group everything through the generic input system. Events can be bound to whatever any input source: physical device, GUI "buttons" by activating the input using `orxInput_SetValue()`, etc... This way, when going from one peripheral to the other, or when going to another platform, only the bindings need to be changed, the processing code itself doesn't change.

`orxInput_SetValue()` sets the value for one frame.

`orxInput_SetPermanentValue()` sets the value till someone sets it to something different.

OrxJoystick

Joystick plugin module. Plugin module that handles joystick-like peripherals.

OrxKeyboard

Keyboard plugin module. Plugin module that handles keyboard peripherals.

OrxMouse

Mouse plugin module. Plugin module that handles mouse-like peripherals.

Config

- [Input](#)
- [Joystick inputs](#)
- [Keyboard inputs](#)
- [Mouse inputs](#)
