

# Keyboard Inputs

There have been many tutorials and examples covered already on using the keyboard for input. These are listed here for your convenience:

- [Keyboard Inputs](#)
- [Detecting Keyboard Key Up](#)
- [Part 10 of the Beginner's Tutorial - Input Controls](#)

## Config

The full list of keys that can be used in your config [is listed here](#).

## Getting a key display name

You can retrieve the display name for a key using `orxKeyboard_GetKeyDisplayName`. This is very handy for pulling in your defined key inputs from your config, and displaying them in your UI. For example:

```
const orxSTRING keyName =  
orxKeyboard_GetKeyDisplayName(orxKEYBOARD_KEY_SPACE);
```

In the above code, if `orxKEYBOARD_KEY_SPACE` is passed, the resulting string is `SPACE`.
